

A satellite image of a hurricane over the ocean. The hurricane has a well-defined eye and spiral cloud bands. The ocean surface is visible in the lower left, and the Earth's horizon is at the top.

Hurricanes

By: Kiera, Emily, and Olivia

Hi guys

You wanna learn all about Hurricanes?

You came to the right place!

how do hurricanes form?

hurricanes are three types of weather like rain, water and wind . so hurricanes can plow down your home, and your trees, and cars so hurricane winds can go to 180mph. also hurricane releases are as much power as a hydrogen bomb. hurricanes can make big floods.

what kind of damage can a hurricane do?

a hurricane can damage your car, trees, homes and your barns. so hurricanes can make floods and trees can fall on your homes in case of a warning or watch. bring food, clothing, first aid kit. be careful.

Where Hurricanes are Found

- Hurricanes are usually found on the coast of the United States

Damage Hurricanes Do

- Hurricanes can do very big, huge, destructive, bad ,bad stuff

Famous Historical Hurricane

- Hurricane Katrina was the most powerful hurricane to hit the United States in 100 years

Stay safe during a Hurricane with these tips.

- If there is a hurricane warning in your area you should leave barrier islands at once.
- Make sure you always have some non perishable food on hand
- If there is a warning in your area make sure to board off all windows and doors

Is a Hurricane a threat in Ohio?

A full on hurricane could never hit Ohio but we could get bad windstorms.

The reason that we wouldn't get a hurricane is because they form over the sea.

But 3 years ago we got a terrible windstorm that knocked out power for days.

Fun Facts

- One minute in a Hurricane can release as much power as a hydrogen bomb
- Storm chasers have to fly in and out of hurricanes whenever there is one
